Description

CABINET FOR STORING FLEXIBLE ENDOSCOPES
creating innovative medical equipment

Cabinets are made of high quality materials and equipped with advanced electronics and components, these stainless steel chambers provide automated drying and controlled storage of flexible endoscopes.

The organization of the internal space allows you to store up to 4 endoscopes at the same time. A microprocessor maintains the proper humidity and temperature, and you can control this process from the touch screen LED display.

The ergonomic design of the cabinet prevents damage to the endoscopes during storage. Cleanliness is maintained by the use of an ultraviolet lamp that disinfects the air supplied to the cabinet and the endoscope channels.

[Key Technical Specifications](#)

Body material: Carbon steel, powder paint

Number of doors: 1

Chamber material: Stainless steel

External dimensions: 675mm (W) x 555mm (D) x 2200mm (H)

Weight: 155 kg

Number of endoscopes stored at one time: 4

Power consumption: 1100 W

UV intensity rate: 14,500 ?W

Operating temperature: 5°? ~ 50°?

Operating humidity: ?90% (setting 30% - 90%)
