Description

Thoracoscope is an endoscopic instrument for research and minimally invasive interventions in the pleural cavity and lung tissues. The instrument is inserted through a puncture in the chest mesh.

Features of the Brightfield thoracoscope

- High image quality and contrast
- Increased working channel for instruments
- Possibility of aspiration with a connected instrument
- The body of the tube and its constituent elements are made of high grade stainless steel
- The endoscope uses elements of optics from a German manufacturer.
- The optical axes are created using the patented lens shaft technology, which ensures the visibility of the entire field of view.
- The cap and sapphire lens are durable and never wear off.
- The valve is made of stainless steel, easy to maintain, protected from damage.
- The connectors are compatible with endoscopic equipment from leading manufacturers, including Storz products.
- Sterilization can take place at low temperatures.
